Reply to Office Action of December 19, 2003

Attorney Docket No. 81784.0253  
Customer No.: 26021

**Amendments to the Specification:**

On page 22, please replace the Abstract Of The Disclosure with the following amended Abstract:

A vertically aligned type liquid crystal display includes a liquid crystal layer disposed between pixel electrodes and a common electrode and containing vertically aligned liquid crystal molecules, the orientation of the liquid crystal molecules being controlled by an electric field. An orientation controller is formed on the common electrode at a position opposing the pixel electrode and an aspect ratio, i.e., a vertical to horizontal length ratio of the pixel electrode is set to at least 2. Alternatively, the pixel electrode is partitioned into at least two electrode regions so that each region represents a divided pixel electrode. An orientation controller is formed on the common electrode so as to correspond to each divided pixel electrode, and an aspect ratio of each divided pixel electrode is set to at least 2. ~~As such, the influence at the edge sections of the pixel electrode is reduced, viewing angle characteristic and transmittance are improved, and average response time is shortened.~~
